

One push. Forty rotations. Zero tangle.

Long-run, low-friction rotation — equiCOG-ready for rotational testing and rehabilitation.

-  Long, smooth runs
-  equiCOG-ready
-  Full VOR workup
-  Doubles as therapy

WHY EQUISWIVEL

Long, smooth runs

Low-friction bearings turn one push into 40+ smooth rotations.

equiCOG-ready

A purpose-built mount eliminates cable entanglement.

Full VOR workup

Vision-allowed, vision-denied, suppression and sinusoidal protocols.

Doubles as therapy

Rehabilitation for unilateral and bilateral vestibular deficits.

FOUR TESTS. FOUR THERAPIES.

1

VOR — Vision Allowed

Visually-enhanced VOR with fixation during rotation.

2

VOR — Vision Denied

VOR assessment with vision occluded.

3

VOR Suppression

Fixation target moving with the chair.

4

Sinusoidal Rotation

Manually delivered frequency-specific stimuli.

5

Unilateral / Bilateral Rehab

Directionally-targeted rotational exercises.

6

Desensitisation & Habituation

Controlled exposure to reduce hypersensitivity.
